(54) MANUFACTURE OF
SEMICONDUCTOR
SUPERLATTICE

(57) Abstract:

PURPOSE: To form a Ge layer and an Si layer or a Ge-Si layer and an Si layer on an Si substrate, and also to put a hetero-epitaxial growth method, in which excellent crystal quality and high growth speed can be obtained, into practical use.

CONSTITUTION: The title
semiconductor superlattice

manufacturing method is the method with which a Ge layer and an Si layer or Ge-Si layer and an Si layer are epitaxially grown on an Si substrate by conducting a depressed CVD method under the atmosphere containing oxidizing impurity gas of 1000ppb or lower using GeH₄ and trisilane (Si₃H₈) as raw gas and also using H₂ or inert gas as carrier gas.
